Designer Tips

For each card

- Print out the relevant Base Card and Mat sheets from the Card Artwork folder. Ensure when printing that you change your print settings to print actual size otherwise the cutting files will not align correctly.
- Place your printed sheet portrait onto your cutting mat aligning to the top and left hand side of the cutting mat. The print registration lines should line up to the 6inch/150mm lines.
- Open up the SVG cutting file on your machine, place your mat into the machine and cut the file.

What if your printed sheets and cutting file does not line up?

- Ensure you printed actual size.
- On the Brother Scan N Cut machines the Additional Line setting needs to be set to 0.1mm.
- Scan in your mat with the printed sheet on and manually align the cutting file in place. To do this group together everything on the file, then move them. You will need to delete off the registration cut lines to be able to move the file up and to the left.
